**Make your swimsuit last longer**  
Yu Chia Min and Letizia Cramer, co-founders of swimwear label Miletì, tell you how to prolong the life of your bikini.

**BEFORE HEADING TO THE BEACH**  
... apply sunscreen at least an hour before you wear your swimsuit. Direct contact with fresh sunscreen may cause its elastic to loosen.

**AFTER SWIMMING**  
... handwash your swimsuit with mild soap and cold water, and hang flat to dry indoors. This prevents the elastic from breaking down. Don't use a fabric softener — it reduces the fabric's ability to manage moisture. If it's not that dirty, water will suffice. Store it in a dry place to prevent bad odours and mould from developing.

**THIS TIME LAST SUMMER ...**  
"I was chasing crabs on the beach near Rebak Island Resort, Langkawi, and I decided to push one into the sea. But then it got out of the water and started chasing me with a vengeance!" — PEARLY TAN, 23.
